ACADEMIC PROJECT UNDERTAKEN :-

1. Emergency App :-Android Application

Environment :- Java, xml, firebase, Android Studio

Description :-

The App is mainly built for emergency management and its objective is to give first-hand information to the user about the emergency incident and reduce the potential damage. The main goal of this app is to send an alert message with current location of victim and make a emergency call to the user family members in an event of an emergency and it also provide users with helpline contact.

2. Gmail Automation Using Python :-

Environment :- Python

Description :-

We come across hundreds of emails a day. One needs to spend a whole day responding to incoming messages in a day. This could be repetitive and boring task. The best part is we can now automate and accelerate this task using python selenium. By using python script we can send bulk of mails. It can recognize the voice and avoid typing the subject, recipient details and content of the mails to send an emails.

STRENGTH:

- Good listener, quick learner and mentoring.
- Flexibility and adaptability.
- Disciplined and strong work ethic.
- Hard working and patience.
